## CHARACTERISTICS OF PROFESSIONAL ELITE-FITNESS EQUIPMENTS

- Geometric proportion moment cam, high quality tensile belt and deflection-proof solid oriented are adopted in the resistance driving system, which makes the resistance more uniformity and placidity.
- 3mm high strength big section ellipse steel tube is used in the main frame, which is good in looking and safe in use.
- Bearing cover and foam of handlebar are made of high quality plastic material and treated in special way, therefore appearance more tender as well as the feeling more comfortable.
- To be convenient for individual adjustment, the adjustable system applies gas spring system and data marking.
- Soft cushion design accords with kinesics, which is supported by steel board of 5mm. This makes the machine more solid and comfortable in use.
- The machine for special muscle can be adjusted by light adjustment of 1.25kg every time.
- The machine has assistant part, can help people adjusting the starting and finishing position to avoid injury when exercising.
- Linear bearing from Germany is selected for the linear moving system which makes the moving more stable with low noise.
- Elite – Fitness Equipment  
Designed and constructed for fully commercial use.
